

The following scenario was presented at one of our regional hospitals. Determine how the woman's G's and P's, (gravity = total number of pregnancies and her Parity = number of living children) were calculated.

The woman is currently pregnant. She is a G8 P1. She has a history of 5 SABs. First pregnancy was twins. At about "7 months" (per pt.) the woman was assaulted the causing her to deliver at home, one stillborn and one live infant who died at 5 months. She also has one other full term living child.

Please complete the following:

Previous Live Births		Previous Spontaneous Terminations		Previous Induced Terminations	Total Prior Pregnancies
Now Living None or Number	Now Dead None or Number	Less than 20 weeks None or Number	20 weeks or more None or Number	None or Number	None or Number
