

STRONG CHILDREN'S RESEARCH CENTER
Summer Research Scholar

Name: Benjamin Coffey

² Complications include bleeding, leakage, balloon rupture, excessive granulation tissue, tract disruption, and, most commonly, dislodgement. Although many complications are minor in nature and can be resolved at home by a patient's caregiver, they are often unprepared to do so and present to the emergency department * ED + for care.

Recent quality improvement * SI+ efforts have successfully reduced the burden of G / tube complications on the healthcare system through standardization of care, caregiver education, and social support. In 2021, the University of Rochester implemented a care bundle consisting of a preoperative checklist, an intraoperative training video, a postoperative feeding plan, and consistent family education = the care bundle successfully reduced the amount of early * > ; 2 day dislodgements by 69%. In 2022, a caregiver support work y as created to assist families of a child y ith the first three months of Gube insertion.
