POLICY ON DOCUMENTATION OF OBSERVATIONS AND ANALGESIC THERAPY FORERANSIVE RODENTS AND BIRDS

UCAR Action regarding noncompliant pain management and sports and documentation with green card the Guide for the Care and Use of Laboratory Animals states "Pain is a stressor and, if not relieved, can lead to unacceptable levels of stress and distrein animals. Furthermore, unrelieved pain may lead to pain response to otherwise nonpainful stimuli (allodynia: Joski and Ogunnaike 2005). For these reasons, the proper use of anesthetics and analgesics in research animals is an ethical and scientific "(The Guide, p.120).

As such, Investigators are required to monitor animals, provide proxidedure analgesia as described in their approved UCAR protocols, and document the observations and analgesic administration appropriately. The observations EMC /P <</MCID 5 >> BDC -operative analgesics to ensure complications.

the written approved protocols. If discrepancies adentified, UCAR will send a letter notifying the Pri Investigator of the noncompliance and will require an action plan to prevent any reoccurrence.

If a second occurrence of frails are to administer or document analgesic administ (o)-6.7 (n)2.3 (is)-1

at DCM mentor the research laboratory staff on appropriate pain will also administer emptive and postoperative analgesics for post ense for a minimum period of three months, from the next surgical M) associated with analgesic doses and DCM's time to administer the

document observation and administration of analgesics in an animal neern and will be discussed by UCAR. Inappropriate dosing of analgesics inistration of analgesizes be reported if UCAR votes to do so. If the surred is supported by PHS, a report will be made to the Office of e protocol is not supported by PHS, then UCAR may make a report that their Department Chair.
