

FOCUS Support System for End Users, "FRIEND"*

Hideyuki Fukushima**

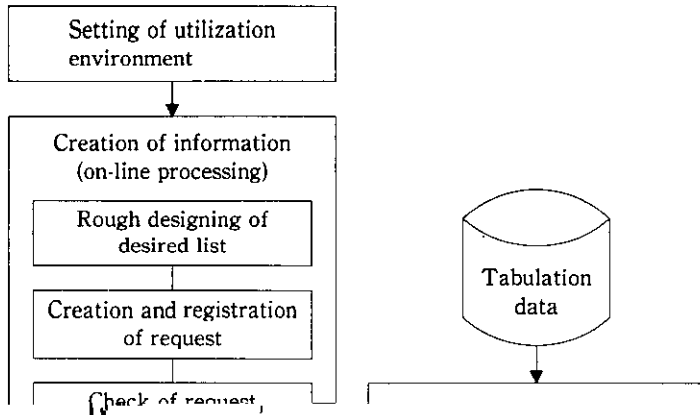

1 Background and Aims of FRIEND Development

The aims of recent computer-aided systematization

divisions.

However, EUL itself still has problems, though its use

has been made easy and its support is limited.

Execution Instruction 11 Immediate execution
 12 Reserved execution
 13 Normal execution
 14 Terminal output

of these modes according to user's needs, tabulation processing will be executed without the intervention of the computer center operator. If normal execution is designated, the request program can be run during the idle computer time (at night or on holidays, for instance), permitting more effective use of computer resources.

(4) Flexibility of Outputting Methods of Tabulation Results

Three output modes are available for tabulation results: output to terminal unit (CRT screen or
