FOREWORD

Makoto Oshima
Executive Vice President

In this advanced information age, the progress of information technology is remarkable in every
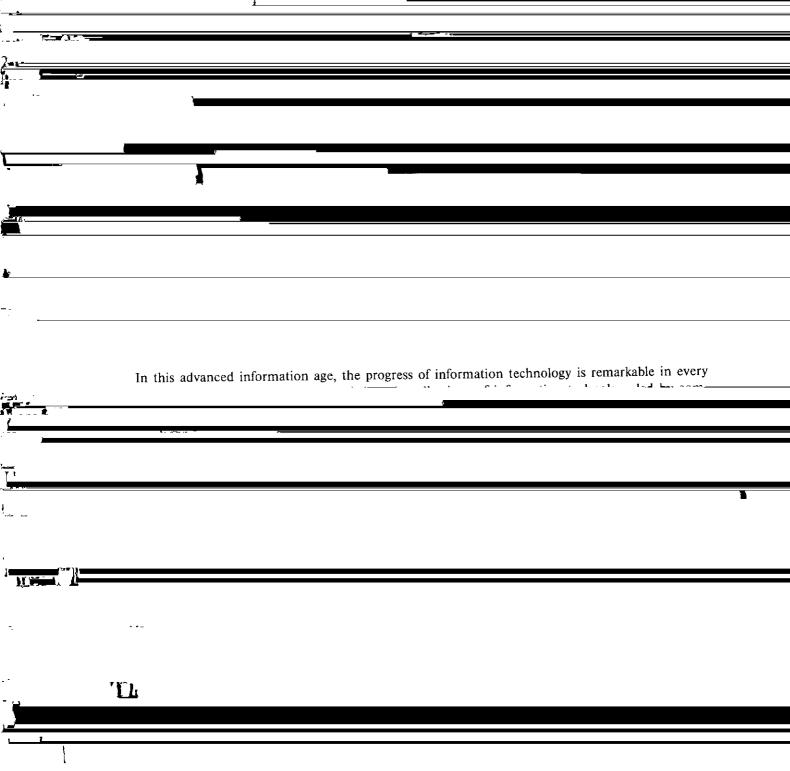

The third was an improvement of information infrastructure, meaning the structuring of a large-scale database, a corporate level network system, LANs for each operating area, and the introduction of super-computer for R & D support. All this has greatly contributed to effective utilization of information for end-user computation.

In the autumn of 1983, KSD was established with an aim of enhancing software development and

growth, and in the autumn of 1988 with virtualy entire information systems function transferred from
